

12	The temperature of a ideal gas is raised from 32.1 °C to 40.5 °C. What is the percentage increase in the r.m.s. speed of its gas particles?	
	A	1.4 %
	B	2.8 %
	C	12 %
	D	13 %

	Ans: A $v_{rms} \propto \sqrt{T}$ $\% \text{ change} = (\sqrt{305.1} - \sqrt{313.5}) / \sqrt{305.1} = 1.4\%$
