

potential.

- 19** Which one of the following statements about the electric potential at a point is true?
- A** The potential is given by the rate of change of electric field strength with distance.
 - B** The potential is defined as the work done per unit positive charge in moving an electron from the point to infinity.
 - C** The potential due to a system of point charges is given by the sum of the potentials due to the individual charges.
 - D** Two points in an electric field are at the same potential when a unit positive charge placed anywhere on the line joining them remains stationary.

Ans: C

- 20** A bulb lights up almost immediately when the switch is closed although the drift velocity of the
