

			400 represents the length of one side of the triangle which cannot be negative.
	3	D	From t = 0 s to point X, car is accelerating (speeding up). Hence, greatest velocity is at X. From X to Z, car is decelerating (slowing down) but still travelling forward, hence the displacement is still increasing till point Z.
	4	C	$s = ut + \frac{1}{2}at^2$
