

- 23 C Use Fleming Left Hand Rule.
- 24 A The component of velocity perpendicular to the B field causes the electron to move in a circle. Using FLHR, electron turns into the page

The component of velocity parallel to the B field causes the electron to travel upwards.

Hence, a helical path upwards.

Magnetic force provides centripetal force for electron.

$$Bev = \frac{mv^2}{r}$$

$$r = \frac{mv}{Be} = \frac{\sqrt{2mK}}{be}$$

$$r \propto \sqrt{K}$$
