

Qn	Ans	Solution
25	B	The current in the wire will result in a magnetic field coming out of the coil according to the right hand grip rule. As the current in the wire increases, the B-field through coil increases. Applying Lenz Law and right hand grip rule to the coil, the induced B-field must be into the coil. Thus, induced current in the coil is clockwise.
26	D	The a.c. is half wave rectified with a single diode.
