

		Therefore when the partition is removed, the P and T remains the same.
10	B	Since temperature is the same, the average kinetic energy is the same. $\langle E_k \rangle = \frac{1}{2} m \langle c^2 \rangle$ $\langle c^2 \rangle \propto \frac{1}{m}$ $\frac{c_{rms,X}}{c_{rms,Y}} = \sqrt{\frac{m_Y}{m_X}}$ $= \sqrt{\frac{1}{2}}$ $= 0.71$
11	B	All Q & W
