

23	D	Effective resistance of right portion increases. Using potential divider principle, S is brighter than before, while P and R are dimmer than before.
24	A	Using the right-hand grip rule at each wire position, the resultant magnetic field due to the contributions from the four wires are as follows: - Downwards at P - Rightwards at Q - Upwards at R - Leftwards at S
25	D	Flux density is maximum at $x = 0$ and $x = 4$. Remains 0.
