

		$\frac{hc}{2R}$
28	D	energy of photon = $\frac{hc}{\lambda}$ $= \frac{(6.63 \times 10^{-34})(3.0 \times 10^8)}{(650 \times 10^{-9})}$ $= 1.9 \text{ eV}$ Transition from E_3 to E_2 gives the same energy.
29	B	The p.d. through which the electrons are accelerated will increase the kinetic energy
