

6	The energy conversions inside a power station burning fossil fuel can be simplified as shown. chemical energy W  thermal energy X  electrical energy Y Which expression gives the efficiency of the power station?			
	A $\frac{Y}{W}$	B $\frac{Y}{(W + X)}$	C $\frac{Y}{X}$	D $\frac{Y}{(W + X + Y)}$
	Answer: A Efficiency = Useful power / Input power $= (Y/t) / (W/t)$ $= Y / W$			

7	A metal wire is stretched to breaking point and the force - extension graph is plotted
