

7 A metal wire is stretched to breaking point and the force–extension graph is plotted.

Which graph is correctly labelled with the elastic region, the plastic region and the area representing the work done to stretch the wire until it breaks?

Answer: D

The force is directly proportional to the extension in the elastic region.
 The work done is given by the area under the force extension graph. Breaking point is at the end of the graph. Only option D fits the description.
