A

$$\text{Intensity received by ear} = \frac{P}{4\pi r^2} = \frac{2000}{4\pi(78)^2} = 0.0262 \text{ W m}^{-2}$$

$$\text{Power received by ear} = P \times A_{\text{ear}} = 0.0262 \times 2.1 \times 10^{-3} = 5.49 \times 10^{-5} \text{ W}$$
