

16	Answer: C
	$A_{net} = A_P + A_Q = A + A = 2A$ $I = kx_0^2 \rightarrow I = k(2A)^2 \text{ --- (1)}$ $A_{net} = A_P + A_Q = 2A + A = 3A$ $I = kx_0^2 \rightarrow I' = k(3A)^2 \text{ --- (2)}$ $\frac{(2)}{(1)} \cdot \frac{I'}{I} = \frac{k(3A)^2}{k(2A)^2} \rightarrow I' = 2.3I$

17	Answer: C
