

		Option D. Wrong n , use $n = 4000$ turns.
26	D	By Faraday's Law, e.m.f. induced, $\varepsilon = \frac{d\phi}{dt}$ $\varepsilon \approx \frac{\Delta\phi}{\Delta t} = \frac{1.2 \times (\pi(0.2)^2 - \pi(0.1)^2)}{0.1} = 1.2 \times \pi(0.04 - 0.01) \times 10 \text{ V}$
27	B	$V = 320 \text{ V}$
