

		()		
10	D	Physical Quantity	Expression	Effect from a larger orbital radius
		gravitational force F	$F = \frac{GMm}{r^2}$	F will decrease
		gravitational p.e. U	$U = - \frac{GMm}{r}$	U will increase
		angular velocity ω	$\omega = \sqrt{\frac{GM}{r^3}}$	ω will decrease
		linear orbital speed v	$v = \sqrt{\frac{GM}{r}}$	V will decrease
		Total energy	$TE = - \frac{GMm}{2r}$	TE will increase
11	A	Using $pV = nRT$
