

29	C	Option A: Incorrect β^- particles are not orbital electrons, they originate from the nucleus. Option B: Incorrect Ionising ability: α-particle – high β^- particle – lower than α-particle γ-ray – very weakly ionising Option C: Correct Option D: Incorrect Penetrating power: α-particle – very short range β^- particle – greater than α-particle γ-ray – most penetrating
30	B	$\ln 2$
