

5a	The Magnetic Flux Linkage in a coil is the product of the area of the coil and the component of the magnetic flux density perpendicular to that area and the number of turns in the coil	M1 A1
b	$\text{e.m.f} = \frac{\Delta NBA}{t}$ $= \frac{540 \times 0.250 \times \pi \times 0.030^2}{1.2}$ $= 0.32 \text{ V}$	B1 C1 A1
ci	light damping	A1
cii	sheet cuts (magnetic) flux and causes induced emf (induced) emf causes (eddy) currents (in sheet) either currents (in sheet) cause resistive force or currents (in sheet) dissipate energy <u>smaller currents</u> in Y or <u>larger</u> currents in X, so dashed line is X	B1 B1 B1 B1
	Total:	10
