

3(a)	$\cos \cos \theta = \frac{0.60-0.08}{0.60}$ $\theta = 29.93 \approx 30^\circ$	M1
(b)		B1
(c)	Using principle of moments and taking moments about P: $700 \times 0.60 \sin \sin 30 = F(1.20 - 0.08)$ $F = 187.5 \approx 188 \text{ N} = 190 \text{ N}$	M1
(d)	Sum forces vertically: $R_y = 700 \text{ N}$ Sum forces horizontally: $R_x = 188 \text{ N}$ $R = \sqrt{700^2 + 190^2}$ $= 725 = 730 \text{ N} \quad (\text{Accept between 725 to 730})$	C1 C1 A1
