

18	A	Since the wave is moving to the right, R will follow the behaviour of the particles to its left, which currently have displacements to the right. B: The distance between P and T is two wavelengths. C: Q vibrates about its position. D: R is not a node.
19	C	$\lambda = (600 \times 10^{-9})(2) / (0.30 \times 10^{-3}) = 4.0 \text{ mm}$
