

		$\frac{u}{v_x} = \frac{\lambda}{m_\alpha} = \frac{1}{6.65 \times 10^{-27}} = 58$
5	D	acceleration of the system = $\frac{F}{M_1 + M_2 + M_3}$ Newton's 2nd law for M_3 $\left(\frac{F}{M_1 + M_2 + M_3} \right)$
6	B	Work done is the area under $F \times$ graph
