

Q28 Ans: D

$$\Delta x \Delta p \approx h$$

$$(7.2 \times 10^{-9})(\Delta p) \approx (6.63 \times 10^{-34})$$

$$\Delta p \approx 9.2 \times 10^{-26} \text{ kg m s}^{-1}$$

Since the uncertainty in the position is the slit width (y -direction), the uncertainty in momentum is also in the y -direction.

Q29 Ans: C
