

$$= m(m^{-1}) = 1 \text{ (dimensionless)}$$

3 C constant acceleration so

$$s = ut + \frac{1}{2}at^2 = t\left(u + \frac{-g}{2}t\right)$$

$$0 = u + \frac{-9.81}{2}(3.20)$$

$$u = 15.7 \text{ m s}^{-1}$$

4 C unthrust depends on weight of fluid
