

25. A horseshoe magnet rests on a top-pan balance with a wire situated between the poles of the magnet.

With no current in the wire, the reading on the balance is 142.0 g.

With a current of 2.0 A in the wire in the direction XY, the reading on the balance changes to 144.6 g.

What is the reading on the balance when there is a current of 3.0 A in the wire in the direction YX?

- A** 138.1 g **B** 140.7 g **C** 145.9 g **D** 148.5 g
