

		Hence magnetic field of P should point out of the paper and Q into the paper.
24	B	Total weight of wire = $0.02000 \times 9.81 = 0.1962N$ Magnetic force is upwards, so tension now = weight – magnetic force Tension = $0.1962 - BIL = 0.1962 - 1 \times 10^{-3} \times 10.0 \times 0.10 = 0.1952N$ Reading on scale = $\frac{0.1952}{2 \times 9.81} = 9.95g$
25	A	At each end of the rod to the centre of the rod, e.m.f induced is Amt of flux cut = $B\pi r^2$ Induced e.m.f = $\frac{d\Phi}{dt}$
