

		Reading on scale = $\frac{0.1952}{2 \times 9.81} = 9.95g$
25	A	At each end of the rod to the centre of the rod, e.m.f induced is $\mathcal{E} = \frac{\text{Amt of flux cut}}{\text{time}} = \frac{B\pi r^2}{T} = B\pi r^2 f = 5.7 \text{ V}$ Since the potential at each end is the same, e.m.f induced between the ends of the rod is zero.
26	B	Voltage across the secondary coil = $120/60 = 2V$ Current = $2/3.0 = 0.67 \text{ A}$
