consider correct and shade your choice in **soft pencil** on the separate **Answer Sheet**.

1 A small object is completely submerged in water. The only significant forces acting on it are its weight and the upthrust. The upthrust is measured as (2.40 ± 0.06) N and the object accelerates vertically downwards at (4.50 ± 0.05) m s^{-2}.

What is the mass of the object, including its absolute uncertainty?

A (0.17 ± 0.01) kg

B (0.17 ± 0.03) kg

C (0.45 ± 0.01) kg

D (0.45 ± 0.02) kg

Commented [YKW(3]: To update options. To catch students who apply N2L wrongly

Commented [HWKA(4R3]: Done, the distractor of 0.17 kg wa calculated by using U-mg=ma
