12 Which of the following statements is **not true** for a stone attached to a rod and swung in a *uniform* vertical circular motion?

Commented [YKW(9]: The option is swapped from original A to C to maintain similar number of A,B,C,D in option

**A** The kinetic energy of the stone is constant throughout the entire circular motion.

**B** The tension in the rod is lowest when the stone is at the highest point of the circular motion.

**C** The magnitude of resultant force acting on the stone changes depending on the position of the stone in the circle.

**D** The resultant acceleration is always directed towards the centre of the circle.
