26 A circular coil of area 300 cm^2 is placed with its plane perpendicular to a uniform magnetic field of 0.0500 T. The coil has 50 turns and a resistance of 10.0 Ω. It is connected to a circuit with a galvanometer with the circuit resistance also being 10.0 Ω.

What is the quantity of charge that flows when the coil is suddenly removed out of the magnetic field?

A 7.50×10^{-5} C

B 3.75×10^{-5} C

C 7.50×10^{-3} C

D 3.75×10^{-3} C
