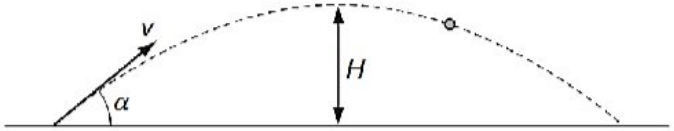
6 A cannon fires a cannonball with an initial speed v at an angle α to the horizontal. The cannonball reaches a maximum height *H* and lands at the same horizontal level from which it was fired.

Which expression gives the horizontal range *R* of the cannonball?



A $R = \frac{2H\cos\alpha}{\sin\alpha}$

B $R = \frac{2H\sin\alpha}{\cos\alpha}$

C $R = \frac{4H\cos\alpha}{\sin\alpha}$

D $R = \frac{4H\sin\alpha}{\cos\alpha}$
