25 A conductor is placed in a uniform magnetic field perpendicular to the plane of the paper. A force *F* acts on the conductor when there is a current in the conductor as shown.

The conductor is rotated 30° about the axis of the magnetic field.

What is the direction of the magnetic field and what is the magnitude of the force on the conductor after the rotation?

	Direction of magnetic field	Magnitude of force
A	into the plane of the paper	F
B	into the plane of the paper	F / 2
C	out of the plane of the paper	F
D	out of the plane of paper	F / 2
