29 A radioactive source consists of 64×10^{12} atoms of nuclide P of half-life 2 days. Another source consists of 8×10^{12} atoms of nuclide Q of half-life 3 days. After how long will the number of undecayed nuclei in the two sources be equal?

A 6 days **B** 9 days **C** 12 days **D** 18 days
